

Parker Hannifin Corporation

Electromechanical Automation Division, New Ulm, MN

Parker Hannifin Corporation is the world's leading diversified manufacturer of motion and control technologies providing systematic, precision – engineered solutions for a wide variety of commercial, mobile, industrial and aerospace markets.

We have two key positions within the business, both with opportunities for future advancement.

Engineer I

We have an immediate opening for a Design Engineer. The ideal candidate will be highly motivated, possess excellent communication skills, and have a proven track record of developing and designing mechanical and electro-mechanical products. Prior design experience in rotating systems, gearing or prior design experience in industrial, automotive, or off-highway equipment is desirable. We require a BSME with 3 or more years of product design experience. Must be fluent with various CAD systems, and able to perform complex calculations. A strong background in materials, and materials processing, advanced design tools (CFD, DFMEA, Six Sigma, Lean) is desired.

Manufacturing Engineer

We have an immediate opening for a Manufacturing Engineer. The ideal candidate will be highly motivated, possess excellent communication skills, and have a proven track record of developing and evaluating new processes and improve current process capability, efficiency, and overall productivity in all areas of manufacturing on new and existing products. We require a BSME, BSMET, or equivalent with 3 or more years of manufacturing engineering experience. Experience with Gear Heads, Motors, and machining preferred.

Full benefit package with company matching 401K, profit sharing and pension programs. See www.parker.com for more information.
